

AdaLN-Zero Gate-Norm Collapse: 10 Worst Layers (v2 / canonical)

AdaLN-Zero gate parameter	$\ w_{v2}\ /\ w_{old}\ $
transformer_layers.7.transition.scale_output	0.26
transformer_layers.7.mhba.scale_output	0.31
transformer_layers.8.transition.scale_output	0.33
transformer_layers.8.mhba.scale_output	0.36
transformer_layers.9.transition.scale_output	0.39
transformer_layers.9.mhba.scale_output	0.42
transformer_layers.10.transition.scale_output	0.45
transformer_layers.11.transition.scale_output	0.48
transformer_layers.12.transition.scale_output	0.52
transformer_layers.13.transition.scale_output	0.60

Layers 7-13: gates collapse to 26-60% of canonical magnitude.
